TenderBlock - Codex Frontend Implementation Guide
Frontend handoff | TenderBlock | 7 November 2026

PURPOSE
Execution brief for teammate Codex implementing the frontend. Inspect existing project instructions and conventions first. Keep changes frontend-scoped unless backend work is separately authorized. Never invent endpoints/fields or fake successful backend actions.
CODEX WORK RULES
Inspect repository and AGENTS.md before coding. Preserve user changes, use existing package manager/style, implement reviewable slices, report blockers, and do not integrate public blockchain test routes into normal dashboards.
PHASE 1 - FOUNDATION
Identify framework and scripts. Build configurable typed API client: base URL, Bearer injection, JSON, multipart, binary downloads, normalized errors. Define exact request/response types, enums, session/logout behavior.
PHASE 2 - AUTH AND SHELL
Implement login/register; roles AUTHORITY, CONTRACTOR, EVALUATOR, AUDITOR only. Display pending account state. Route role dashboards. Handle 401/403 without exposing exception details.
PHASE 3 - SHARED UI
Build pagination controls, status badges, dialogs, field errors, loading/empty/error states, PDF download helper. Keep money as decimal strings and format Instants.
PHASE 4 - ADMIN
GET /api/v1/admin/users/pending and /users with page,size,sort. GET /users/{id} and /users/{id}/details. PATCH /users/{id}/verify|reject|disable|enable. Tender approval PATCH /tenders/{id}/approve body {"evaluatorId":"uuid"}; rejection PATCH /tenders/{id}/reject body {"reason":"..."}. Backend has no evaluator-specific list; user list can be client-filtered only within loaded pages, so request backend endpoint for scalable selection.
PHASE 5 - AUTHORITY
Profile POST /api/v1/company/profile; GET/PUT /company/profile/me. Tenders POST /api/v1/tenders with title,description,estimatedValue,submissionDeadline,openingDate; GET /tenders/my; PUT /tenders/{id}; PATCH /tenders/{id}/cancel body {"reason":"..."}. Opening date must follow deadline. Cancellation only for own PUBLISHED/UNDER_EVALUATION.
PHASE 6 - CONTRACTOR
Browse GET /api/v1/tenders/published; details GET /tenders/{id}. Create bid POST /api/v1/bids/tender/{tenderId} body {"quotedAmount":123.45}. Upload PUT /bids/{bidId}/proposal using FormData field file, then submit POST /bids/{bidId}/submit. Own bids GET /bids/my and GET /bids/{bidId}; PDF GET /bids/{bidId}/proposal. One bid per tender; no edit after submission.
PHASE 7 - EVALUATOR
Assignments GET /api/v1/evaluator/tenders/my. Open POST /tenders/{id}/open-bids; list GET /tenders/{id}/bids; proposal GET /bids/{id}/proposal. Save PUT /bids/{id}/evaluation body {"technicalScore":80,"financialScore":90,"remarks":"..."}; finalize POST /bids/{id}/evaluation/finalize; read GET /bids/{id}/evaluation; award GET /tenders/{id}/award. Finalized evaluation is immutable.
PHASE 8 - AUDITOR
List GET /api/v1/auditor/reports; detail GET /reports/{id}; claim POST /reports/{id}/claim; resolve POST /reports/{id}/resolve body {"issueConfirmed":true,"resolutionNotes":"..."}. Confirmed issue may void an awarded tender. Tender detail can fail for auditor due to

backend bug; report blocker rather than bypassing authorization.

PHASE 9 - HANDOFF

Run existing frontend lint/build/tests where available and report results. Verify role/status routes, DTO fields, upload/download, pagination and errors. Summarize changed files, verification, and backend dependencies. Do not modify unrelated backend code under frontend-only scope.

REQUEST DTO QUICK REFERENCE

Register: fullName,email,password. Login: email,password. Company: companyName,registrationNumber,gstin,pan,address,contactNumber,website. Tender create/update: title,description,estimatedValue,submissionDeadline,openingDate. Approval: evaluatorId. Reject/cancel: reason. Bid: quotedAmount. Evaluation: technicalScore,financialScore,remarks. Resolve report: issueConfirmed,resolutionNotes.

VALIDATION QUICK REFERENCE

Register name max100, email max254, password 8-72. Company fields use SRS constraints. Tender title max200; estimated value positive max2 decimals; submission future; opening future and later. Bid quote positive max2 decimals. Scores 0-100 max2 decimals. Reject reason max1000, cancel reason max2000, evaluation remarks max5000, resolution notes required max5000. PDF max10MB, multipart field file.

KNOWN BACKEND BLOCKERS

Public blockchain test read/write routes; JWT is logged by backend filter; no refresh/password reset; no evaluator search endpoint; admin/auditor tender-detail role defect; inconsistent cancellation HTTP statuses; no CORS configuration; no pagination cap; report generation service has no caller. Do not silently work around these in the UI.
